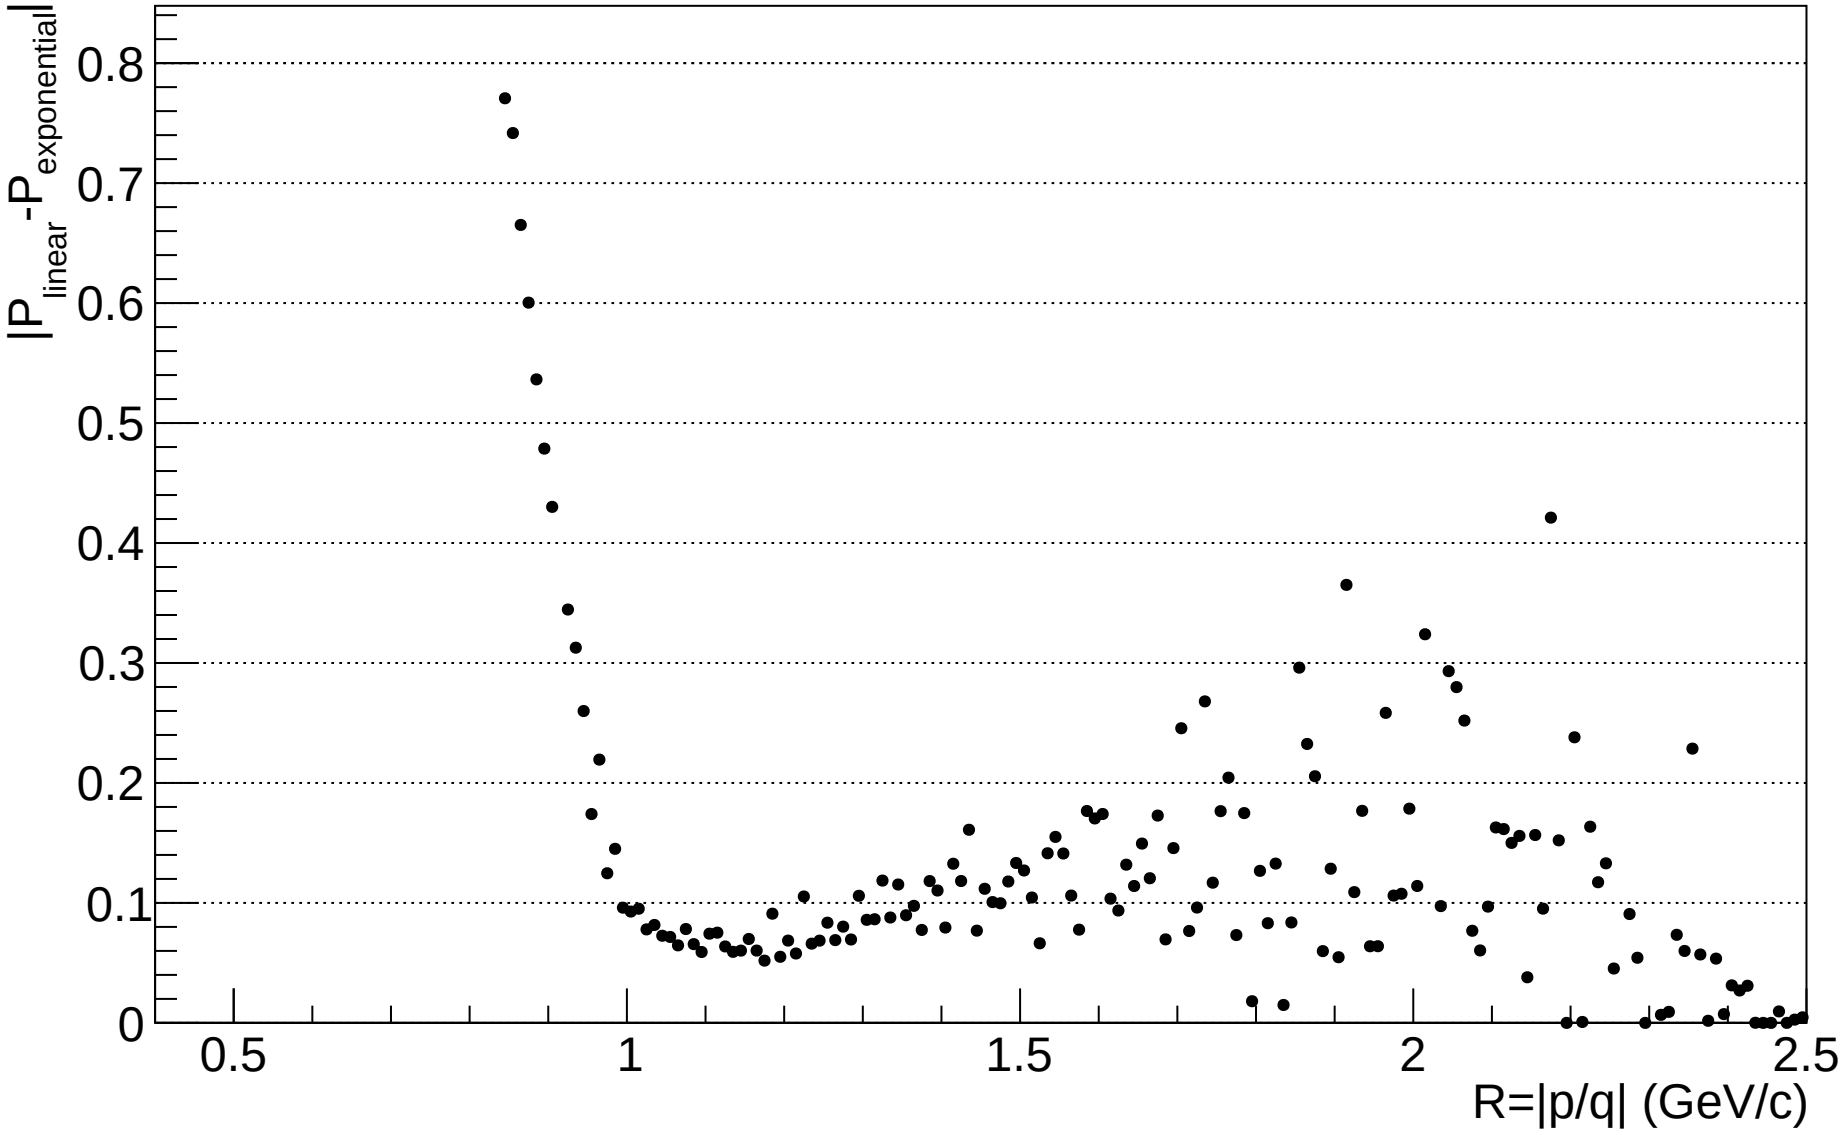
Au+Au FXT: 13.5 GeV beam energy | 2020 P24iy | inclusive accepted events
Background-model dependence; converged fits including poor-residual reference fits
TPC gate purity S/(S+B)
R=|p/q| (GeV/c)
Gaussian + positive linear BG + nearby-nucleus Gaussian(s)
Gaussian + exponential BG + nearby-nucleus Gaussian(s)

Au+Au FXT: 13.5 GeV beam energy | 2020 P24iy | inclusive accepted events


Model difference is separate from covariance error bars; not a full systematic uncertainty
