

R 0.40-2.50 is rigidity, NOT physical He momentum; dE/dx bin 0.50 keV/cm; dotted: mean ± 2.0σ

Charge-inclusive, centrality-integrated; native dE/dx storage ends at 120 keV/cm

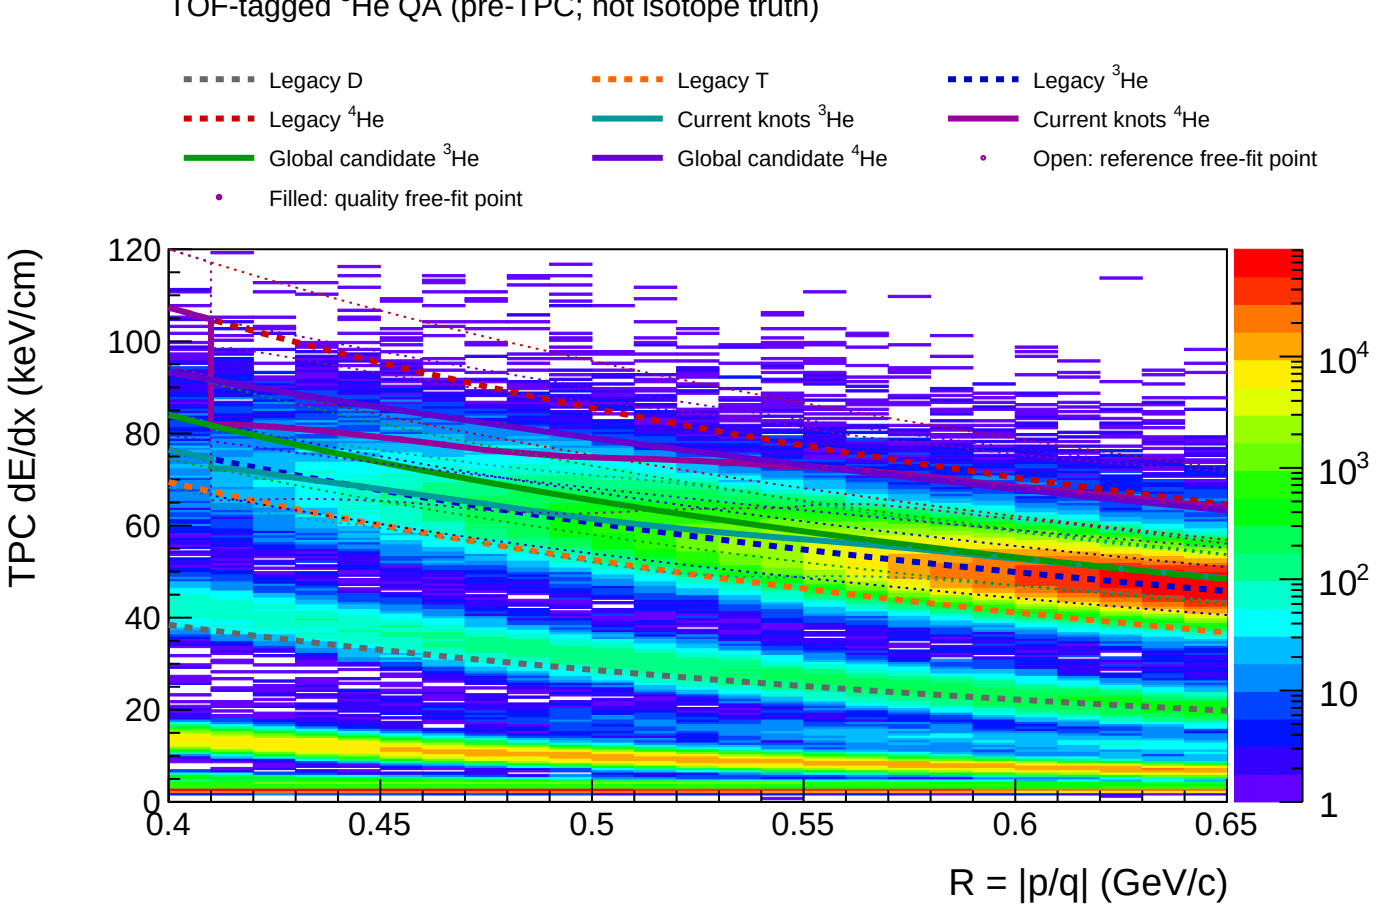

R 0.40-0.65 is rigidity, NOT physical He momentum; dE/dx bin 0.50 keV/cm; dotted: mean ± 2.0σ

Charge-inclusive, centrality-integrated; native dE/dx storage ends at 120 keV/cm

R 0.40-2.50 is rigidity, NOT physical He momentum; dE/dx bin 0.50 keV/cm; dotted: mean ± 2.0σ

Existing tag: $1.78285 < (m/q)^2 < 2.06485$ $(GeV/c^2)^2$; subset of ALL, no double counting
