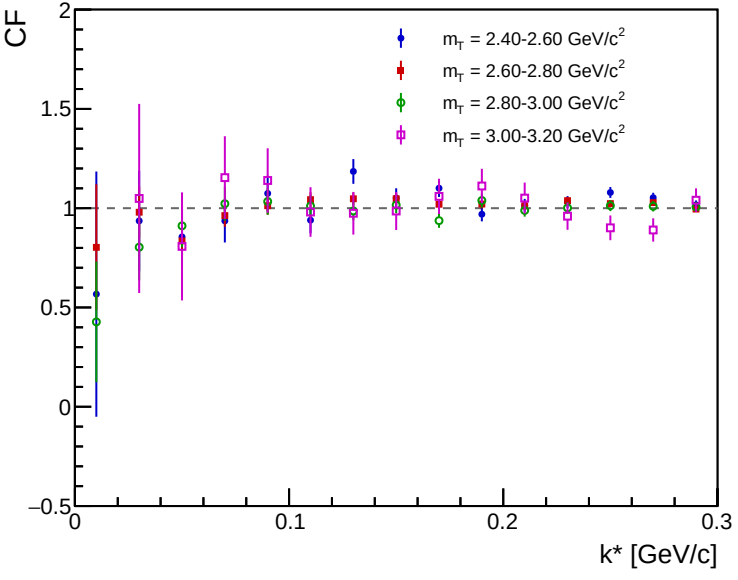
Λ-^{4}He: m_T-selected correlation functions

Signal: ±3σ; normalization 0.30-0.40 GeV/c; no hidden clipping of finite errors

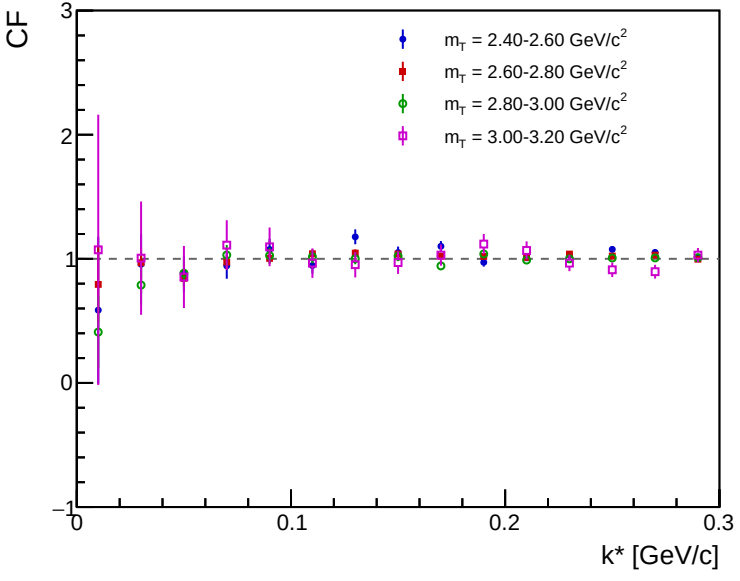
Shared inclusive P(k*) (Method 5 approximation): purity is NOT fitted separately in each m_T slice

Constant purity



Shared inclusive P(k*)

(Method 5 approximation)



The same supplied CF values are reused; this renderer performs no fit or background correction.
